BERT

BERT: Pre-training of Deep Bidirectional Transformers for Language Understanding

Jacob Devlin Ming-Wei Chang Kenton Lee Kristina Toutanova

Google AI Language

{jacobdevlin, mingweichang, kentonl, kristout}@google.com

Abstract

We introduce a new language representation model called **BERT**, which stands for **B**idirectional **E**ncoder **R**epresentations from

There are two existing strategies for applying pre-trained language representations to downstream tasks: *feature-based* and *fine-tuning*. The feature-based approach, such as ELMo (Peters

ENABLING PORTABILITY WITH NGC CONTAINERS

NGC Deep Learning Containers

Extensive

- Diverse range of workloads and industry specific use cases

Optimized

- DL containers updated monthly
- Packed with latest features and superior performance

Secure & Reliable

- Scanned for vulnerabilities and crypto
- Tested on workstations, servers, & cloud instances

Scalable

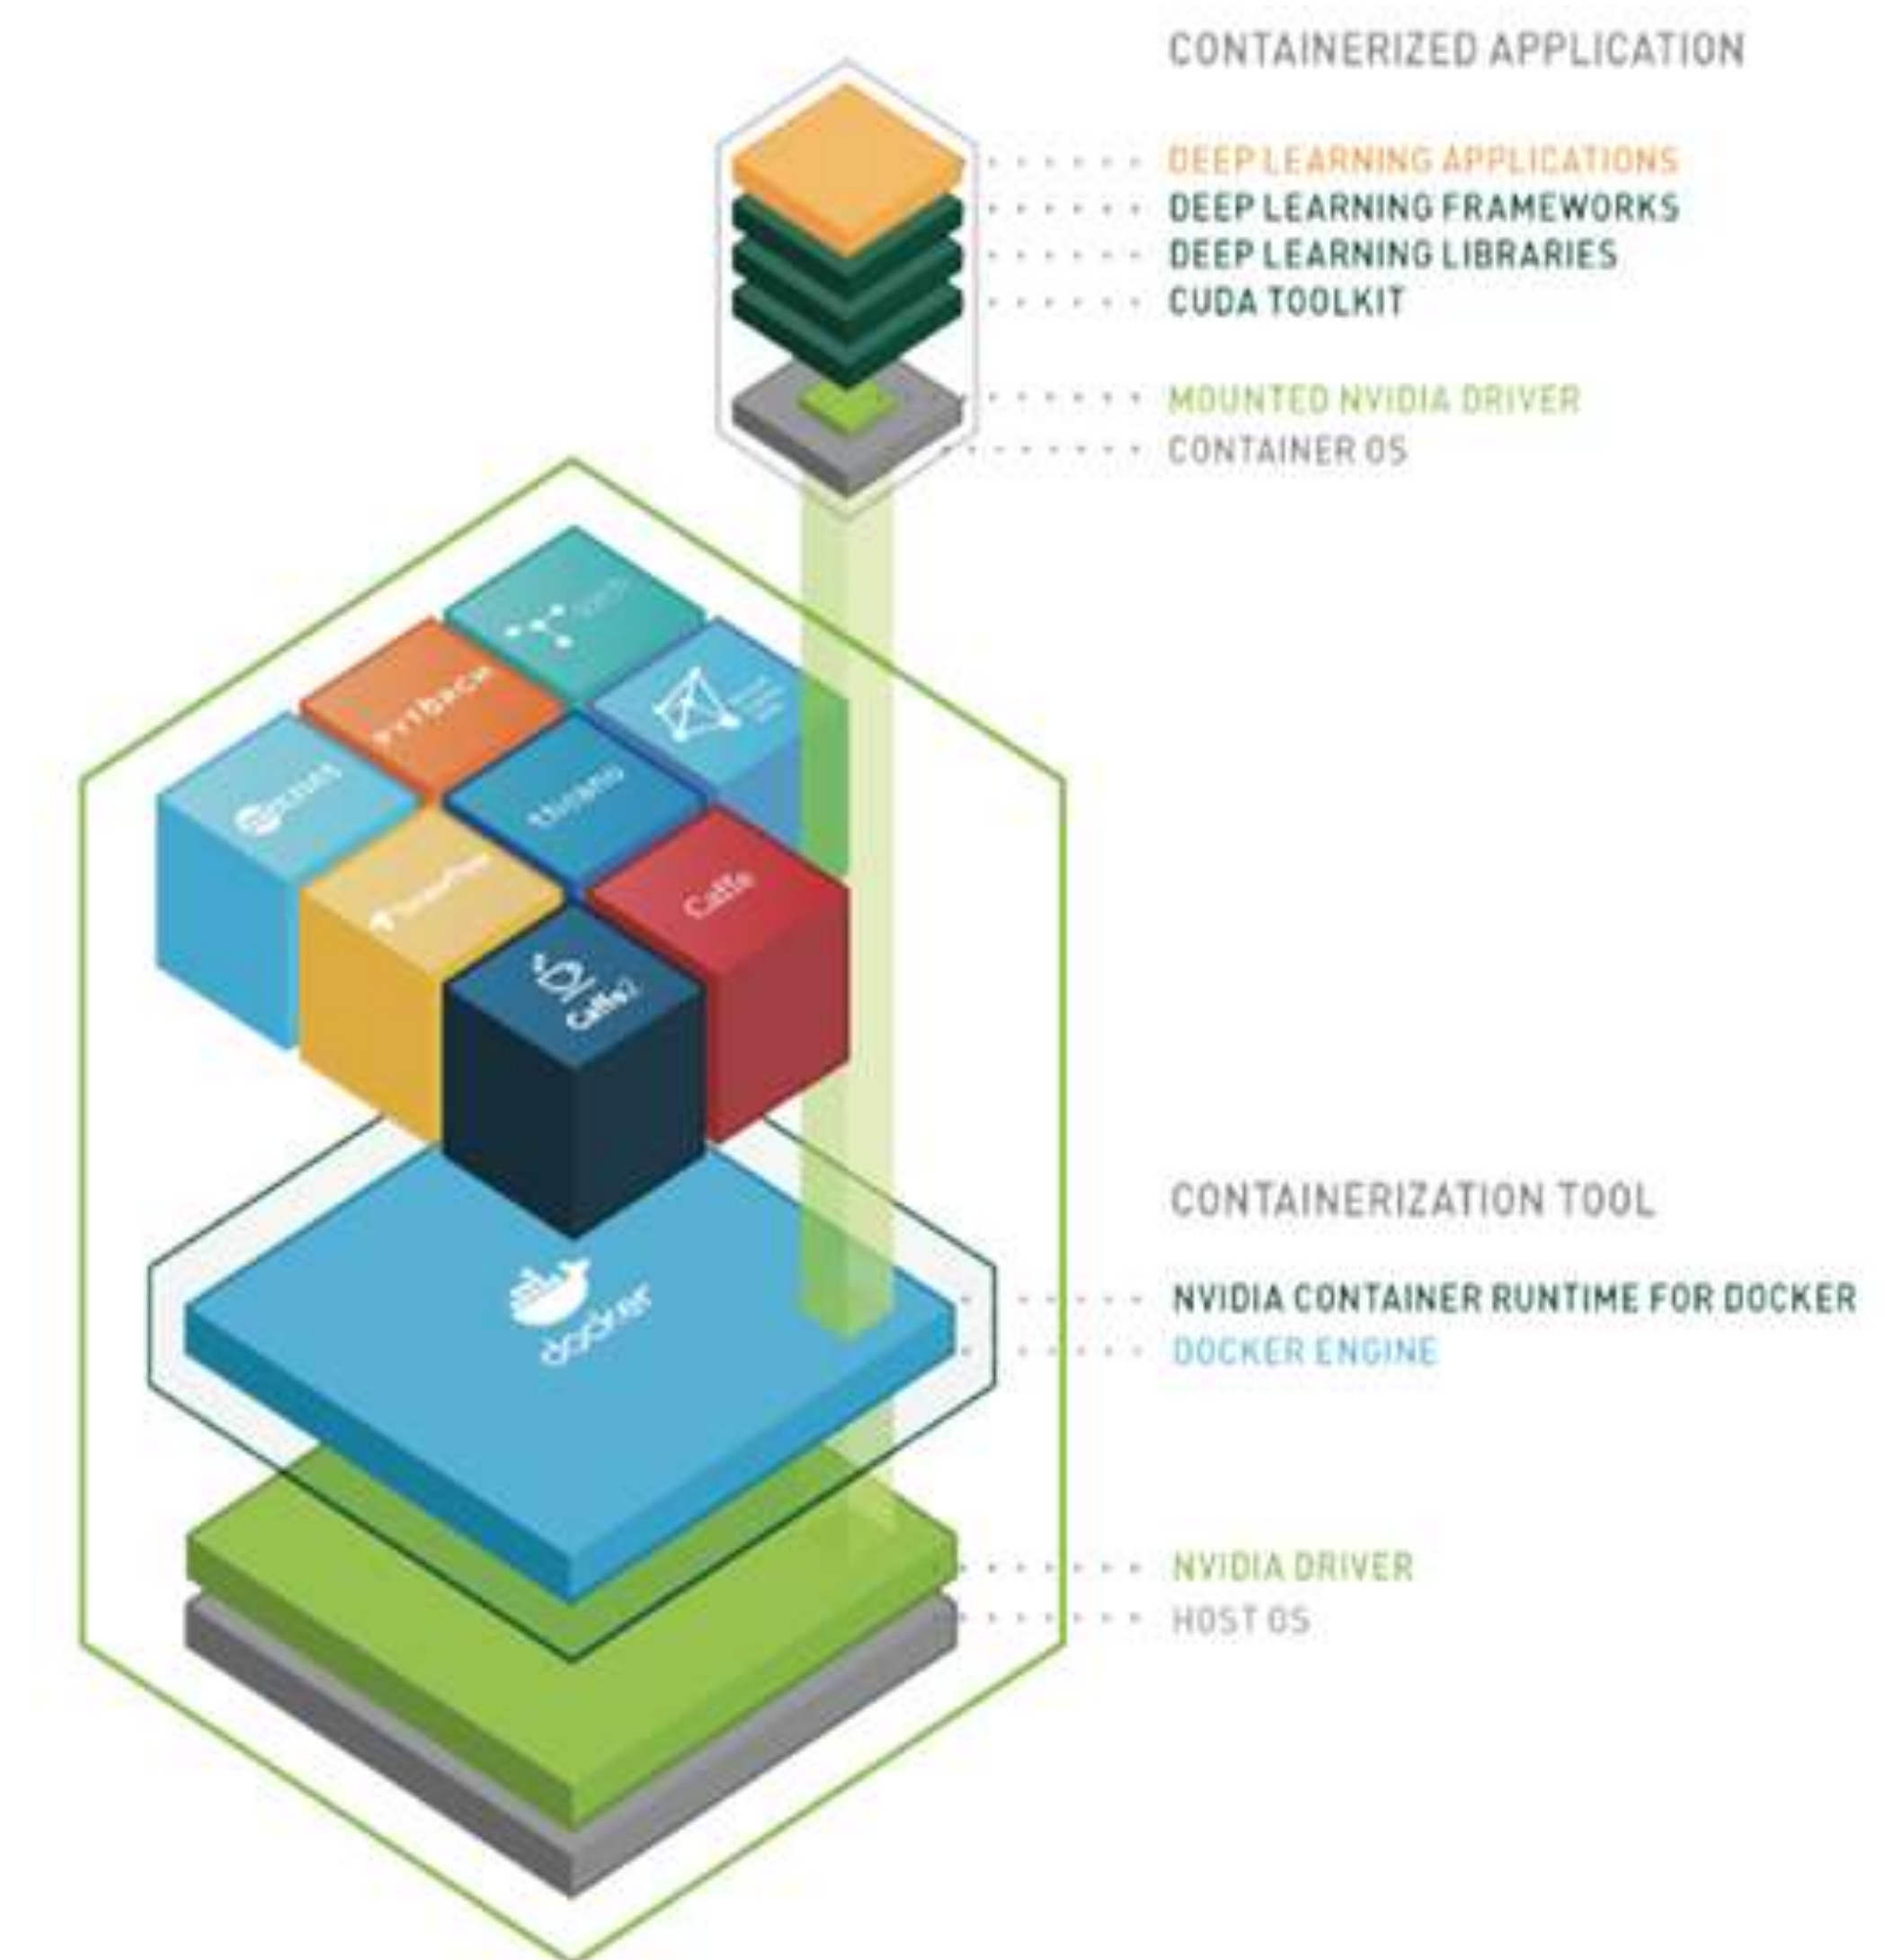

- Supports multi-GPU & multi-node systems

Designed for Enterprise & HPC

- Supports Docker, Singularity & other runtimes

Run Anywhere

- Bare metal, VMs, Kubernetes
- x86, ARM, POWER
- Multi-cloud, on-prem, hybrid, edge

Next Steps for This Class

The screenshot shows the NVIDIA NGC Catalog interface for the PyTorch container. The breadcrumb navigation at the top reads "Containers > PyTorch". The main header "PyTorch" is displayed. Below the header, there are tabs for "Overview", "Tags", "Layers", "Security Scanning", and "Related Collect". The "Overview" tab is selected. On the left side, there is a sidebar with the PyTorch logo, the text "Accelerated with NVIDIA", and a "Features" section containing "NVIDIA AI Enterprise Supported" and "Signed Images". Below the features is a "Description" section. The main content area on the right contains the title "PyTorch" and a paragraph describing it as an optimized tensor library for deep learning using GPU. It also mentions that the PyTorch NGC Container includes all dependencies for tasks like conversational AI, NLP, and recommendation systems. Below the description is a "Prerequisites" section.

Description

PyTorch is a GPU accelerated tensor computational framework. Functionality can be extended with common Python libraries such as NumPy and SciPy. Automatic differentiation is done with a tape-based system at the functional and

PyTorch is an optimized tensor library for deep learning using GPU at both a functional and neural network layer level. This functional framework and provides accelerated NumPy-like functionality. NGC PyTorch NGC Container comes with all dependencies included, pre-configured for conversational AI, natural language processing (NLP), recommendation systems, and more.

The PyTorch NGC Container is optimized for GPU acceleration, and performance. This container also contains software for accelerating workloads.

Prerequisites

Using the PyTorch NGC Container requires the host system to have

Step 1 Sign up for NGC

- <https://docs.nvidia.com/dgx/ngc-registry-for-dgx-user-guide/index.html>

Step 2 Visit NGC Catalog

<https://catalog.ngc.nvidia.com/orgs/nvidia/containers/pytorch>

Step 3 Pull and Run Container

- Visit <localhost:8888> to check out a JupyterLab environment

Closing Thoughts

Copying Rocket Science

The background features a series of diagonal, overlapping bands in various shades of green, creating a sense of depth and movement. A solid, vibrant green vertical bar is positioned along the left edge of the frame.

Let's get Started!
